A Story of Numbers

Time: 1 Hour

Marks: 30

Section A - Choose the correct alternative. ($6 \times 1 = 6$)

1) 'BC' stands for:

- a) Before Calendar b) Before Christ c) British Century d) Before Common

2) The Latin term 'Anno Domini' means:

- a) Age of the Divine b) Year of Our Lord c) After Death d) Ancient Date

3) A period of 100 years is called:

- a) Decade b) Millennium c) Century d) Era

4) The earliest known notations for numbers appeared in:

- a) Egypt b) India c) Mesopotamia d) China

5) In the Bakhshali manuscript, zero was represented by:

- a) A small circle b) A dash c) A dot d) An empty space

6) Modern digits 0-9 originated in:

- a) Greece b) Rome c) India d) China

Section B - Answer the following. ($4 \times 2 = 8$)

1) Write the full forms of BCE and CE.

2) Convert LXIV into Hindu-Arabic numerals.

3) Convert 84 into Roman numerals.

4) The years AD 401 to AD 500 belong to which century? Explain in one line.

Section C - Answer the following. ($4 \times 3 = 12$)

1) Convert the following into Roman numerals: (a) 275 (b) 542

2) Convert the following into Hindu-Arabic numerals: (a) CDXLV (b) MCMLXXII

3) Add the following Roman numerals without converting them to Hindu numerals: DCCXLV + CCLXII

4) Find the product of the following Roman numerals, without converting them to Hindu numerals: XV $\times$ III

Section D - Answer the following. ($1 \times 4 = 4$)

1) In an ancient tally system, urapon = 1 and ukasar = 6. Numbers are formed by repeating these words; for example, ukasar-ukasar means $6 + 6 = 12$.

Evaluate: (ukasar-ukasar-ukasar-ukasar) - (urapon), showing your working.
