Q.1 (A) Read the following extract and complete the activities given below: (10)

SMART goals are a methodology of thinking that helps people reach success. SMART stands for specific, measurable, achievable, realistic and time-bound. SMART goals have a specific rubric: Specific: Involves identifying a specific area for improvement. The more specific the area, the more refined the achievement of one's goal can be. Measurable: Quantifying goals provides specific ways to track progress against goals. This makes it easy to benchmark performance throughout the goal period, including areas to improve. Achievable: Setting goals that can be completed in the designated period of time. Realistic: It is important to create goals that are within one's current skill set or area of expertise. Time-bound: Establish time parameters around each goal, as it will help increase focus and accountability.
