A shopkeeper decides to sell a certain item at a certain price. He tags the price on the item by increasing the decided price by 25%. While selling the item, he offers 20% discount. Find how many more or less percent he gets on the decided price.

Class: VIII

$$\text{Let SP} = 100$$

$$\text{Increase} = \frac{25}{100} \times 100$$

$$= 25$$

$$\text{Decided Price} = ₹ 125$$

$$\text{Disc} = 20\%$$

$$\text{Disc} = \frac{20}{100} \times 125$$

$$= 25$$

$$\text{F.P} = 125 - 25$$

$$= 100$$

reduces

$$360 - 60$$

1. If marked price = ₹ 1700, selling price = ₹ 1540 then find the discount.

$$\begin{aligned}
 MP &= 1700 \text{ Rs} \\
 SP &= 1540 \text{ Rs} \\
 D &= MP - SP
 \end{aligned}$$

If marked price = ₹ 990 and percentage of discount is 10, then find the selling price.

$$MP = 990$$

$$D\% = 10\%$$

$$D = D\% \text{ of } MP$$

$$= \frac{10}{100} \times 990 = \boxed{99}$$

$$\begin{aligned}
 D &= MP - SP \\
 SP &= MP - D \\
 &= 990 - 99 \\
 &= 891
 \end{aligned}$$

Class:

VIII

If selling price = ₹ 900. Discount is 20 %, then find the marked price.

$$\begin{array}{l|l} SP = 900 & SP = 80 \\ MP = x & MP = 100 \end{array}$$

$$\frac{x}{900} = \frac{100}{80}$$

$$SP = MP - D$$

$$x \propto \frac{1}{y}$$

$$\begin{aligned} (x) &= \frac{1}{\frac{1}{x \times y}} \\ x &= 15 \times 48 \\ &= \boxed{}_{100} \end{aligned}$$

$$K = \frac{x}{y}$$

$$\begin{aligned} K &= x \times y \\ 100 &= x \times 30 \\ x &= \frac{100}{30} \\ &= \boxed{} \end{aligned}$$
