IX CBSE
Academic Conquest - V — Answer Key

SECTION - A

- A1.** (c) Troposphere
A2. (c) Monsoon
A3. (c) First-Past-The-Post (FPTP)
A4. (b) 1950 (25 January 1950)
A5. (c) Power lies with the people

SECTION - B

- A6.** Insolation is the incoming solar energy from the Sun that is intercepted by the Earth. Insolation decreases from the equator towards the poles; hence, temperature also decreases from the equator towards the poles.
- A7.** Sea breeze blows from sea to land during the day, when the land becomes warmer than the sea, creating a low-pressure area over land. Land breeze blows from land to sea during the night, when the land cools faster than the sea, creating a low-pressure area over the sea.
- A8.** Delimitation is the process of determining the number of seats and fixing the territorial boundaries of constituencies for elections to the Lok Sabha and Vidhan Sabha. It is necessary to ensure that the ratio of seats to population remains as equal as possible across constituencies, as boundaries change with shifts in population density.
- A9.** In Direct Elections, citizens vote directly to choose their representatives, e.g., members of the Lok Sabha and Vidhan Sabha. In Indirect Elections, citizens vote for representatives who then choose/elect the leaders, e.g., the President and Vice President of India.
- A10.** The Rule of Law ensures equality before the law and equal protection of the law, establishing that no one is above the law. It protects citizens by ensuring that disputes are resolved through courts of law using procedures established by law, not by force, and that no citizen is punished without due process.

SECTION - C

- A11.** (i) Very heavy monsoon rains intensified by western disturbances brought excess moisture. (ii) Major rivers of Punjab (Satluj, Beas, Ravi, Ghaggar) were already flowing high before the heavy rains began. (iii) Additional rainfall and water from the hills caused the rivers to overflow, leading to severe flooding. (Human-made causes such as weak embankments, encroachment near rivers, and silt accumulation may also be credited.)
- A12.** Any three: (i) ECI creates and revises the electoral roll, including Special Intensive Revision (SIR). (ii) ECI decides the schedule and date of elections. (iii) ECI registers political parties and allocates election symbols. (iv) ECI ensures free and fair elections through the Model Code of Conduct, EVMs/VVPAT, and voter awareness initiatives.
- A13.** The separation of powers divides government functions among the legislature (makes laws), the executive (implements laws), and the judiciary (interprets laws and reviews their constitutionality). This prevents concentration of power in one organ and maintains checks and balances, e.g., the judiciary can review parliamentary amendments to ensure they conform to the Constitution.

SECTION - D

A14. The atmosphere has five major layers: (i) Troposphere — average height 12 km, temperature decreases with altitude, contains air we breathe, water vapour and clouds; site of weather phenomena. (ii) Stratosphere — extends up to 50 km, free of clouds, contains the ozone layer that filters harmful UV radiation. (iii) Mesosphere — extends up to 80 km, temperature decreases with altitude, meteors burn up here. (iv) Thermosphere — extends from 80–700 km, temperature rises rapidly, contains the ionosphere, site of auroras. (v) Exosphere — uppermost layer with very thin air, light gases escape into space. (Any four layers with correct characteristics to be credited.)

OR

A14. Natural causes: very heavy monsoon rains intensified by western disturbances; rivers Satluj, Beas, Ravi and Ghaggar already flowing high before the rains. Human-made causes: weak/old river embankments (dhūsī bāndh); houses and farms built too close to rivers; silt and mud accumulation reducing river/dam capacity; delayed or unclear flood warnings. Effects: loss of lives; displacement to relief camps; damage to farmland, crops, poultry/dairy; damage to roads, bridges and public buildings; spread of waterborne diseases due to standing water.
