VIII SB

Academic Conquest - IV

Subject: Geography

Time: 1 hour

Marks: 30

Q.1. Choose the correct alternative and rewrite the sentence: (Any 6 of 8) (6)

1. The layer of the earth's interior lying below the crust is called the _____.
(a) core (b) mantle (c) lithosphere (d) asthenosphere
2. The thickness of the oceanic crust is approximately _____ km.
(a) 30 to 35 (b) 7 to 10 (c) 100 (d) 2900
3. The discontinuity between the crust and the mantle is called the _____ discontinuity.
(a) Conrad (b) Moho (c) Gutenberg (d) Sial
4. The amount of water vapour present in 1 cu.m. of air is called its _____.
(a) relative humidity (b) absolute humidity (c) saturation (d) condensation
5. Clouds found at an altitude of 7000 to 14000 m are classified as _____ clouds.
(a) low (b) medium (c) high (d) nimbostratus
6. The shallowest part of the ocean floor, lying nearest the coast, is the _____.
(a) abyssal plain (b) continental shelf (c) continental slope (d) marine trench
7. The deepest trench in the world is the _____.
(a) Mariana Trench (b) Chagos Plateau (c) Grand Bank (d) Sargasso Sea
8. Deep ocean currents are formed due to differences in temperature and density, a process known as _____ circulation.
(a) monsoon (b) thermohaline (c) planetary (d) tidal

Q.2. Fill in the blanks: (Any 4 of 6) (4)

1. The core of the earth begins at a depth of around _____ km from the earth's surface.
2. _____ waves cannot travel through the outer core.
3. When the relative humidity of the air becomes 100%, _____ starts taking place.
4. _____ clouds are indicators of a thunderstorm and bring rain with lightning.
5. The average depth of the oceans is around _____ metres.
6. Deep ocean currents are formed due to _____ circulation.

Q.3. State whether the following statements are True or False. Correct the false statements: (Any 4 of 6) (4)

1. The core of the earth's interior is made up of hard rock.
2. Secondary waves cannot pass through the outer core.
3. The continental crust is made up of silica and magnesium.
4. The continental shelf is the deepest part of the ocean floor.
5. Warm ocean currents make the climate of the nearby coast cooler.
6. Deep ocean currents are formed due to differences in temperature and density of ocean water.

Q.4. Give geographical reasons for the following: (Any 4 of 6) (8)

1. There is variety (difference in composition and state) in the interior of the earth.
2. The mantle is considered the centre of earthquakes and volcanic eruptions.
3. Clouds float in the sky instead of falling down.
4. The continental shelf is considered a paradise for fishing activity.
5. Some marine islands are actually the peaks of submerged mountains.
6. Ports on the eastern coast of Canada freeze in winter.

Q.5. Distinguish between: (Any 2 of 3)

(4)

1. Continental crust and Oceanic crust
2. Relative humidity and Absolute humidity
3. Continental shelf and Continental slope

Q.6. Answer the following in detail: (Any 1 of 2)

(4)

1. Draw a neat, labelled diagram of the interior of the earth and describe its main layers.
2. Explain, with examples, the classification of clouds on the basis of altitude.
