Let total journey = x

30% of $x = \frac{30}{100} \times x$

I stage $= \frac{3x}{10}$

Remaining $= x - \frac{3x}{10}$

$= \frac{7x}{10}$

35% of $\frac{7x}{10} = 91$

2600

Date: 16/10

Class: VIII

total units = 1000

Let first month = x

second month = $1000 - x$

$$\frac{\frac{1000-x}{x} \times 100 = 150}{}$$

25% = 12 days

1% = $\frac{12}{25}$ days

100% = $\frac{12}{25} \times 100$

$\frac{1}{10\cancel{0}} \times 3\cancel{0}$

$= \frac{3}{10} = 0.3$ minutes

$= \frac{3}{1\cancel{0}} \times 6\cancel{0} = 18$ seconds

$$\frac{A(\Delta ABC)}{A(\Delta PQR)} = \frac{AB^2}{PQ^2} = \frac{BC^2}{QR^2} = \frac{AC^2}{PR^2}$$

$\frac{100}{400} = \frac{1}{4} = \frac{1}{2} = \frac{1}{9}$

आनंद गगनात न मावणे

दो समरूप त्रिभुजों की संगत भुजाओं का अनुपात 3:5 हो तो उनके क्षेत्रफलों का अनुपात ज्ञात कीजिए।

$\frac{3^2}{5^5} = \frac{9}{25}$

$\Delta LMN \sim \Delta PQR$, $9 \times A(\Delta PQR) = 16 \times A(\Delta LMN)$, यदि QR = 20 तो MN का मान ज्ञात कीजिए।

$9 \times A(\Delta PQR) = 16 \times A(\Delta LMN)$

$\frac{A(\Delta PQR)}{A(\Delta LMN)} = \frac{16}{9}$

$\frac{A(\Delta PQR)}{A(\Delta LMN)} = \frac{QR^2}{MN^2}$

$\frac{16}{9} = \frac{QR^2}{MN^2}$

$\frac{16}{9} \times \frac{400}{MN^2}$

$16 \times MN^2 = 400 \times 9$

$MN^2 = \frac{400 \times 9}{16} = 25$

$MN = 5$

$\frac{16}{9} = \frac{20^2}{MN^2}$
